Fruit fly and flying insect traps

Fruit fly and flying insect traps

Fruit flies and other small flies are an increasing problem indoors – especially around fruits. They are not only a nuisance but carry fungal and bacterial pathogens that accelerate fruit spoilage.

AgriSense have developed a new trap that is easy to use discrete and effective. The trap is made of clear plastic coated on one side with our proprietary “dry touch – no mess” flying insect glue.

The glue area is 19.5cm x 4.1cm and is covered with a quick release paper. At the base of the trap is a strip of mild adhesive to attach the trap to a window or cupboard surface. The traps can be printed in up to 4 colours with designs specified by the customer.

The traps are packed 3, 4 or 5 per 4 colour printed inner box with integral “Eurohook” and 5, 6 or 12 inner boxes packed per 1 colour printed 1 piece outer box. The packed product is supplied palletised and shrink wrapped on Euro-Pallets and prices can be quoted either ex works or delivered.

Prices vary depending on the final specification required and the quantity forecasted/ordered for 1 season.

The product has a minimum shelf life of 3 years from the date of manufacture. All traps and inner boxes can be marked with a unique code enabling full traceability.

As with all our retail home and garden products, the size of the product and the packaging can be varied to suit client's wishes.

- ✓ No product registration required.
- ✓ Product design and configuration to suit target costs.
- ✓ A novel, safe and effective “Bio-rational” product.
- ✓ Works for 3 months.
- ✓ 3 year shelf life.
- ✓ NON PESTICIDE.
